Regardless of where you are on the asset management maturity matrix, our suite of EAM solutions can meet your needs and move you further along the path to continuous improvement.

- Business Process Design
- Performance Management
- Capital Planning
- Cloud
- Mobile
- MRO Inventory and Procurement
- Benefit Realization
- Master Data Management
- System Integration
- EAM Training

EAM

Enterprise Asset Management

EAM is commonly defined as the coordinated activity of an organization to realize value from assets. In our experience EAM is fully realized through strategic organizational alignment, proven and scalable business processes, carefully configured technology, and clean, rich data. These elements form the foundation of a comprehensive and balanced Enterprise Asset Management initiative.

“We’re extremely thankful to have partnered with Stratum Consulting for our implementation going from MP2 to EAM. They facilitated a smooth change over and set us up for success with the framework and administrative skill sets to advance in the future.”

We work collaboratively with our clients to optimize the delivery and performance of their EAM software and physical assets.

How do we approach EAM implementations?

Understanding our clients' day-to-day operations allows us to unite early, exchange feedback, and fully understand the requirements that align with our clients' strategic goals. To achieve this unity, we form a team of consultants and key client stakeholders who focuses in on the present and future state of the business to create a set of agile business processes based on ISO 55000 principles.

EAM configuration begins after the designed business processes are reviewed and approved. These agreed-upon processes are the blueprint for how EAM is configured.

Knowledge transfer happens collaboratively to assure long-term success. Together we develop a training program which enables our clients to become self-sufficient.

The final step is a process of looking back. How did we do? Once this step is complete, we can move beyond implementation and work with our clients to mature their asset management program through customer care and continuous improvement opportunities.

We serve our clients consistently by:

- Arriving prepared and delivering quality every day.
- Engaging with integrity and humility, and delivering with excellence.
- Utilizing our experience and expertise to provide creative solutions.

We provide best-in-class expertise in the EAM space by:

- Thinking beyond current industry standards and best practices.
- Delivering simple to use technical solutions.
- Putting the right information at the right time into the hands of each user.
- Distilling data into business intelligence to drive productivity.
- Implementing sound business processes.
- Eliminating redundant activities and errors through automation.
- Improving data quality.
- Driving efficiencies and lowering costs.

We know we're succeeding when we hear our clients say:

- Stratum takes the time to understand the nuances of my company's business.
- Stratum takes the time to get to know and understand our people.
- Stratum provides experienced and knowledgeable resources.
